

EcoAct UK Environmental Policy

EcoAct UK helps its clients to address their business challenges by designing, building and operating intelligent sustainability solutions. We are proud of our environmental achievements and were the first carbon management consultancy to achieve ISO 14001 certification.

Our goal is to be a responsible corporate citizen leading by example in protecting the environment. Whilst our operational impacts are very low, we seek to reduce these even further through our Environmental Management System (EMS).

We commit to protect and enhance the environment, including the prevention of pollution and the minimisation of waste. We will manage our services, our materials and our people to reduce negative environmental impacts associated with our work and to contribute to positive environmental improvements.

We pledge to implement and operate the EMS to the ISO 14001:2015 standard. The EMS is implemented within the EcoAct UK office only.

This Environmental Policy provides the framework for our environmental objectives, which are to:

- Minimise our greenhouse gas emissions and offset our unavoidable emissions, including the personal carbon footprints of our employees.
- Promote energy and water efficiency.
- Limit the environmental impacts of staff travel, by reducing the need to travel and choosing alternative, less environmentally impactful options where practicable.
- Apply the waste hierarchy to follow environmental and waste management best practice and aspire to send zero waste to landfill.
- Reduce use of resources, eliminate unnecessary wastage and investigate green procurement options, engaging with our suppliers to support this objective.

We are committed to the continual improvement of our EMS to enhance our environmental performance and to meet or exceed our policy commitments. We ensure that this policy and our environmental commitments are available to all parties interested in the performance of our Environmental Management System.
